

ALEGRA · CONFIDENTIAL

Monthly Business Review

July 2026 Performance

▼ LOWLIGHTS

- SMB came in well below the month's targets, reaching 54.9% of the New MRR goal (\$38.8K) and 60.9% of New Logos (1,519). The largest gap sat in the Dominican Republic, which closed at 25% of its revenue target while still ramping ahead of the upcoming e-invoicing mandate.
- DR's high CAC (\$510 blended, >\$1,100 paid) reflects the DGII e-CF mandate not yet being enforced, not channel inefficiency. The signal: keep budget mitigated until obligation kicks in, then ramp aggressively, leveraging the newly enabled ICP segmentation to direct spend toward converting segments. Goal: bring paid CAC back to \$400 USD and blended CAC to \$300 USD, improving both further from there.
- Several POS outages during the month weighed on the customer experience, with POS Support CSAT falling 25 points. Restoring and safeguarding POS stability is a priority as we scale the product; the team is working to prevent recurrence.
- Mexico grew below budget despite improved acquisition efficiency. Contactability remains the binding constraint — outbound numbers flagged as spam and low answer rates are compressing MQL-to-logo conversion. Dialing experiments and a local trust-building strategy are now underway.
- A magnitude 7.4 earthquake struck Colombia — our largest market — on August 10, prompting a national state of disaster. Our immediate priority is the safety and support of team members and their families. As an external force-majeure event, some short-term commercial impact is expected; the full effect is still being assessed as response efforts continue.

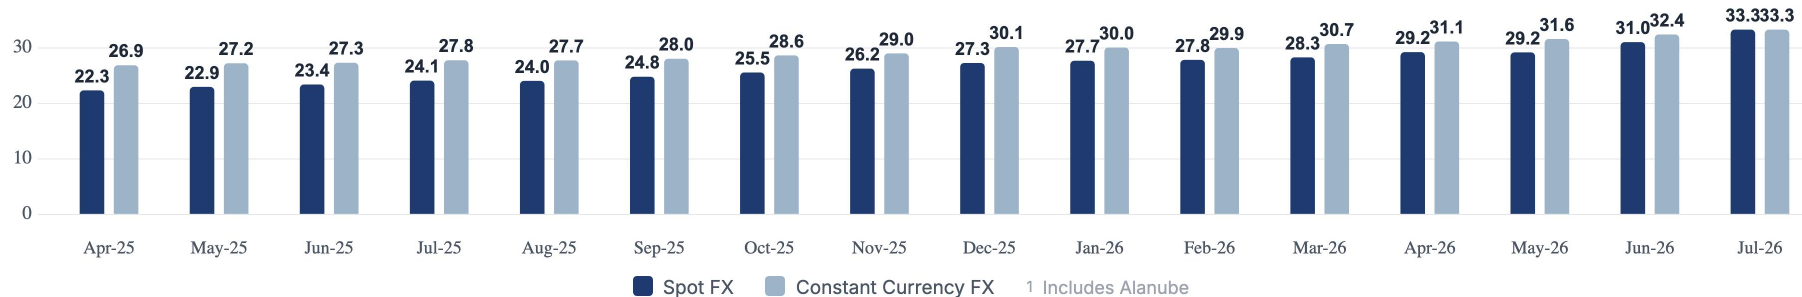

FINANCIAL UPDATE

July closed strong: revenue reached \$2.79M, +13.7% vs budget and +40.4% YoY, though roughly half of that beat is FX (COP appreciation) rather than organic growth — real local-currency growth was closer to 5–6%. Gross margin expanded to 83.5% (+1.7pp vs budget), helped by a one-off AWS accrual reversal and a favorable payment-processor mix. EBITDA hit \$486K — 3.1x budget and the best month of the year — as the revenue beat flowed straight through with OpEx essentially on plan (-0.3%). Cash closed at \$4.68M, +162% vs budget and the highest balance of 2026, the 7th straight month above plan. YTD EBITDA margin swung from -9.9% to +11.2% (+21pp YoY), putting the full year on track to beat budget meaningfully (\$3.2M EBITDA projected vs \$1.3M budgeted). Bottom line: a genuinely healthy month operationally, with FX acting as a tailwind worth flagging rather than banking on going forward.

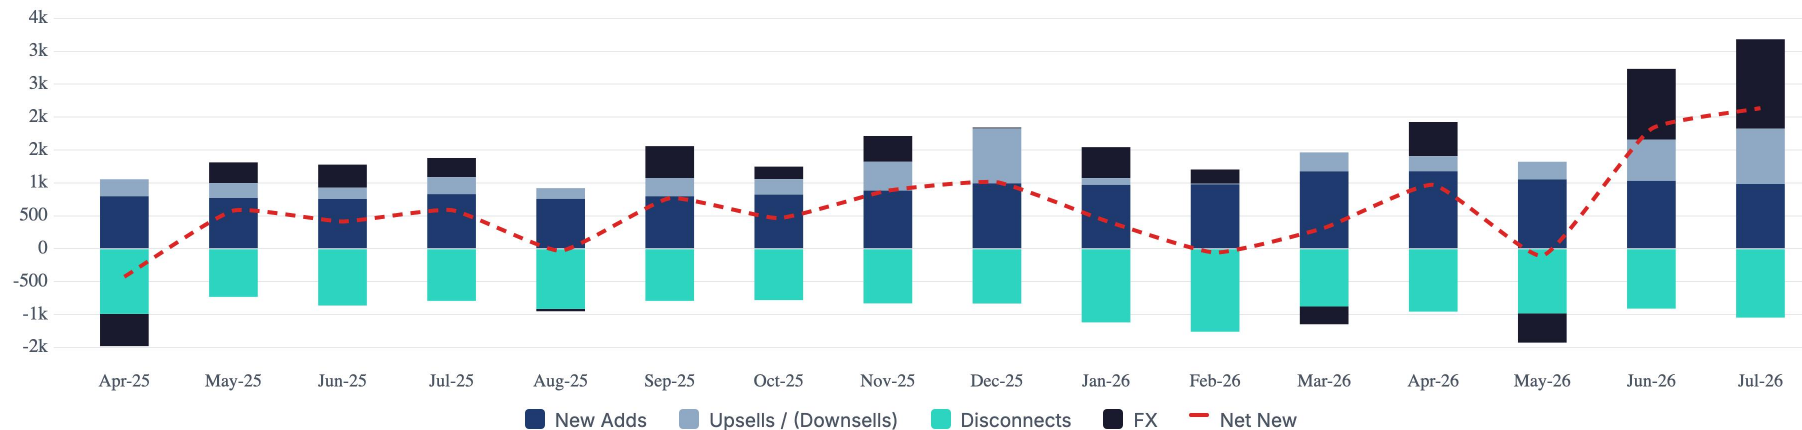

◆ HIGHLIGHTS

- Overall churn held at 3.9% in July (Core 2.4%, Lite 4.9%) — the results demonstrate the effectiveness of our adoption strategy despite challenges in specific markets.
- Sales leadership is now in place after a period of interim coverage. The incoming Head of Sales restores dedicated ownership of commercial execution and attainment, completing the Revenue leadership structure.
- AI-driven optimization reduced Support headcount by 17% versus January while sustaining service volume — the team now handles more customer demand per person, a step-change in cost-to-serve and scalability.
- **Commercial:**
 - AI-powered quality assurance now covers 100% of sales calls, up from 30% reviewed manually.
 - Apex Academy cut time-to-first-deal for new reps from 30 days to 7.
 - ICP-focused targeting in Costa Rica lifted the qualified-client mix from 54% to 68%.
- The demand engine had its strongest month of the year in July. Sign-ups grew +25.4% (36,061) and MQLs +14.0% (18,556) — the best traffic month of 2026 — with direct traffic stabilizing after two soft months and lead nurturing rebounding to its best conversion in weeks.

Cross-Sell & Up-Sell: What Is Actually Driving Expansion

July 2026

Expansion is down — largely a deliberate pricing pullback

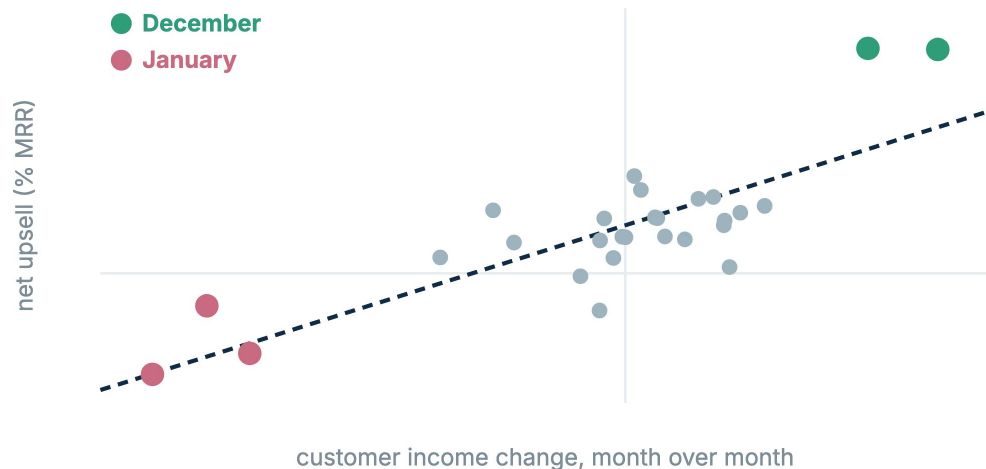

STRUCTURAL MOVEMENT OF THE EXISTING BASE · BY SEMESTER · % OF START MRR · BUDGET TRM (FX-NEUTRAL) · EXCL. NEW LOGOS & CHURN					
COUNTRY	All	Colombia	Mexico	Dominican Rep.	Costa Rica
MRR MOVEMENT	1H24	2H24	1H25	2H25	1H26
Net Upselling	+0.9%	+5.9%	+0.8%	+3.9%	-0.9%
Net Cross-selling	+0.4%	+0.6%	+0.0%	+0.1%	-0.3%
Net Discounts	+1.1%	+0.6%	+0.5%	+0.5%	+0.6%
Pricing	+4.8%	+7.5%	+10.6%	+1.0%	+2.4%
Net Expansion MRR	+7.3%	+14.7%	+11.9%	+5.6%	+1.7%

Click a row — the chart shows its components, monthly, to reveal the trend

Most of the ~15%→~2% decline is deliberate: we eased off pricing, our strongest lever. Genuine tariff drove ~+6–10% per semester through 1H25; we chose to raise less this year (~+2% in 1H26). The learning: the churn we feared from price increases does not necessarily stick, so we likely have **room to be more intentional** — a strategic call, not a miss. Easing it, though, exposed the real gap: upsell and cross-sell are not picking up the slack.

WHAT MOVES NET UPSELL · PLAN CHANGES VS. CUSTOMER INCOME (FX-NEUTRAL)

THE STRATEGY · PRICING + PRODUCT + PROCESS, WORKING TOGETHER

No single lever fixes this. Expansion has to become a **system** — pricing, product and the commercial team giving and using clear value levers, not one-off reactions.

1 Be intentional with pricing

Our strongest lever. Easing this year was a **deliberate call** — and the data says the churn we feared from price increases does not necessarily stick. So there's room to push. The question is **when and how much**, not whether.

biggest lever · room to push

2 Give the team value to sell

Upsell tied to usage the customer keeps — **users, warehouses, API, storage, AI** — and a second product that **sticks**: today customers buy Payroll/POS then drop it and keep Accounting, costing ~1pt of expansion. Without value levers from pricing & product, a CS quota alone is empty.

2nd product = ~1pt at stake

3 Build a real expansion process

Today it's **reactive** — we sell when the customer asks. Build systematic account identification, **triggers**, qualification, offers and follow-up — the KAM / Account Management + CS motion. That turns upsell/cross-sell into something we generate, not something we wait for.

proactive · KAM + CS

None of these levers work alone — expansion becomes structural only when pricing, product and process move together. That's the shift: from ad hoc pushes to a system the commercial team can run every quarter.

GROWTH

Core Acquisition: Channel Mix, Conversion Efficiency and Retention

July 2026

Colombia does more with less: nearly the same Core logo volume with 26% fewer MQL — a real efficiency gain, not a decline. Mexico grows in volume, but without improving its conversion. (January 2025 to July 2026)

COLOMBIA EFFICIENCY

-26.4% MQL

for -3.6% in logos (nearly same output)

MEXICO GROWTH

+11.7% logos

with +10.5% MQL (no efficiency gain)

PAID MEDIA COLOMBIA

53.8% → 41.0%

shift in Dec-2025

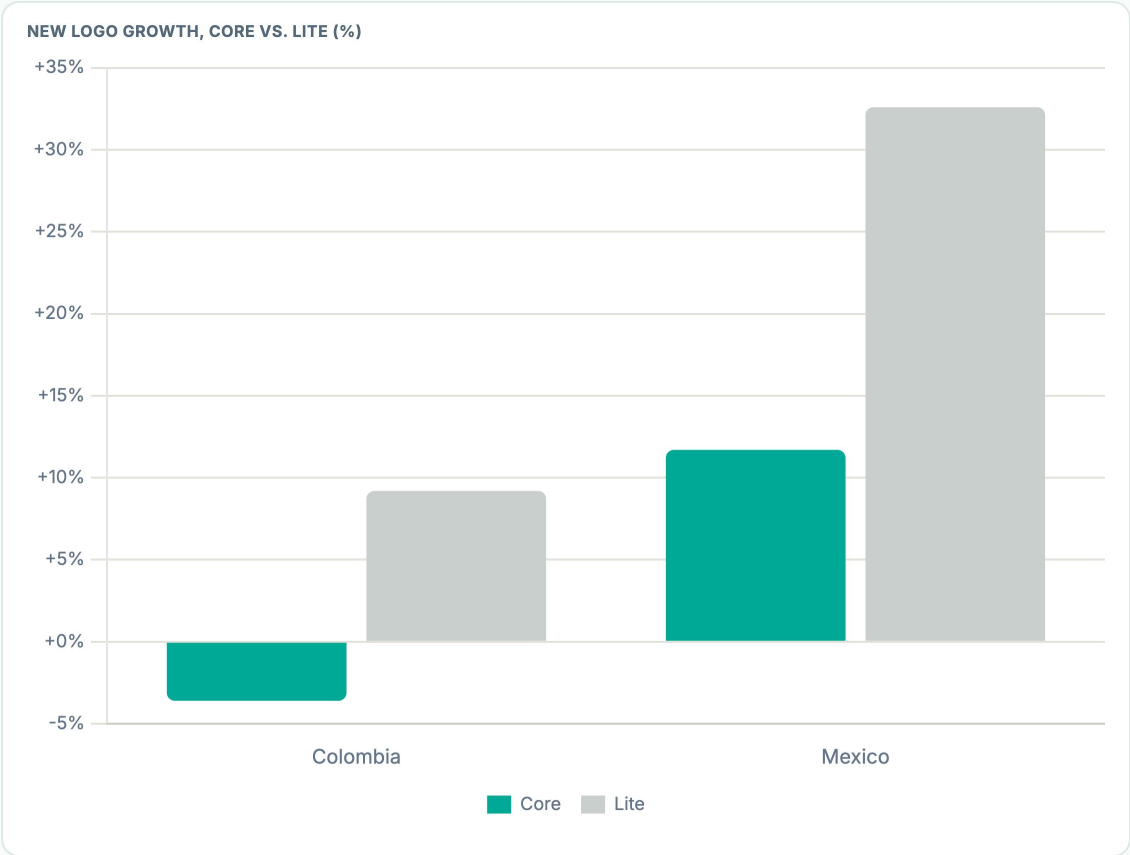

CONVERSION MEXICO

21.5% → 20.9%

stagnant, -0.6pp

Colombia didn't decline — it got more efficient. Lite outpaces Core in both countries.

New logo growth, H1 2026 vs. H2 2025. Core's declining share of the total isn't because Core stalled — it's because Lite advanced faster in both countries.

	CORE	LITE
Colombia	-3.6%	+9.2%
Mexico	+11.7%	+32.6%

So what: Colombia achieves nearly the same Core logo volume (-3.6%) with 26.4% fewer MQL — not a decline, a real efficiency gain. In Mexico both segments grow, but Lite nearly 3x faster than Core (+32.6% vs +11.7%), without Core improving its conversion.

Both countries adjusted Paid Media investment — the result looks different in each

In both countries, the only action taken was cutting Paid Media to look for efficiencies. In Colombia, the cutback revealed the brand strength the market already had — Direct Traffic filled the gap on its own. Mexico doesn't have that brand cushion yet.

	JAN-NOV 25	DEC 25-JUL 26
Colombia	53.8%	41.0%
Mexico	59.8%	55.9%

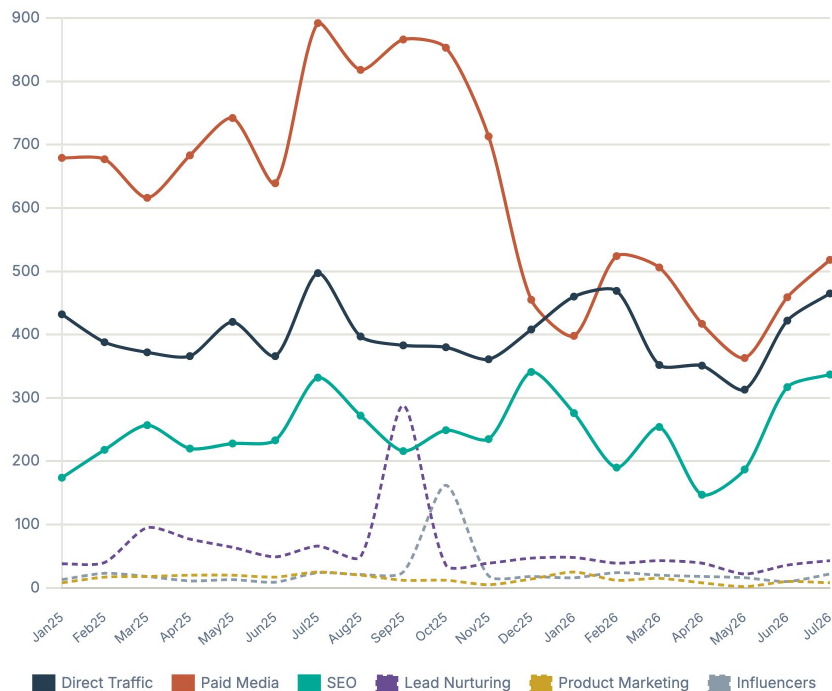

So what: in Colombia, the mix shifted on its own (~12.8pp all at once, Dec-2025) — the market already knew to search for Alegra directly. In Mexico the mix barely moved (-3.9pp); the effect stayed contained within Paid itself, as an efficiency gain, not a mix change.

Volume behavior confirms the same pattern

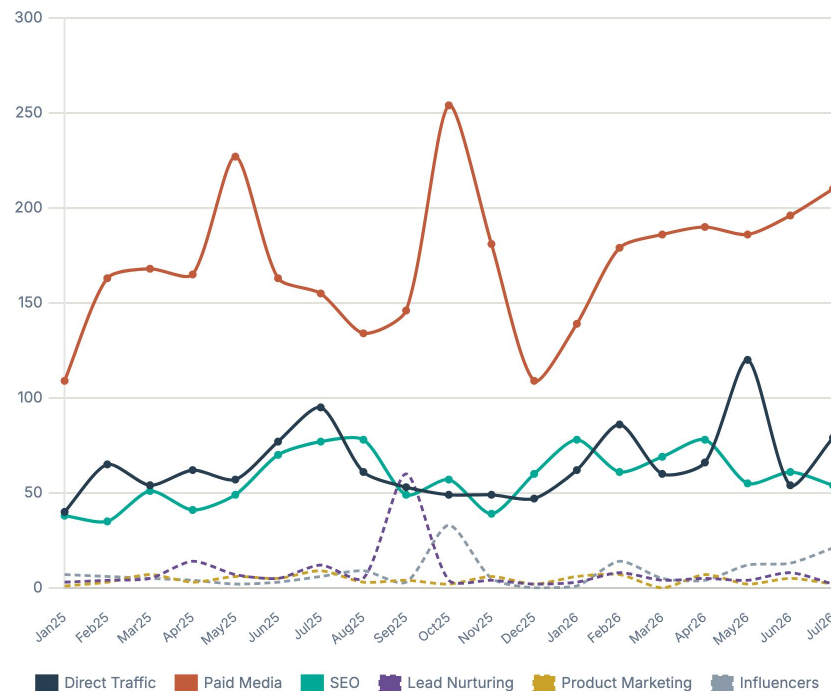

Discussion topic · 4/11

Core MQL by channel, month by month. Different scales by market size — what matters is the shape of the curve.

COLOMBIA — MQL BY CHANNEL

MEXICO — MQL BY CHANNEL

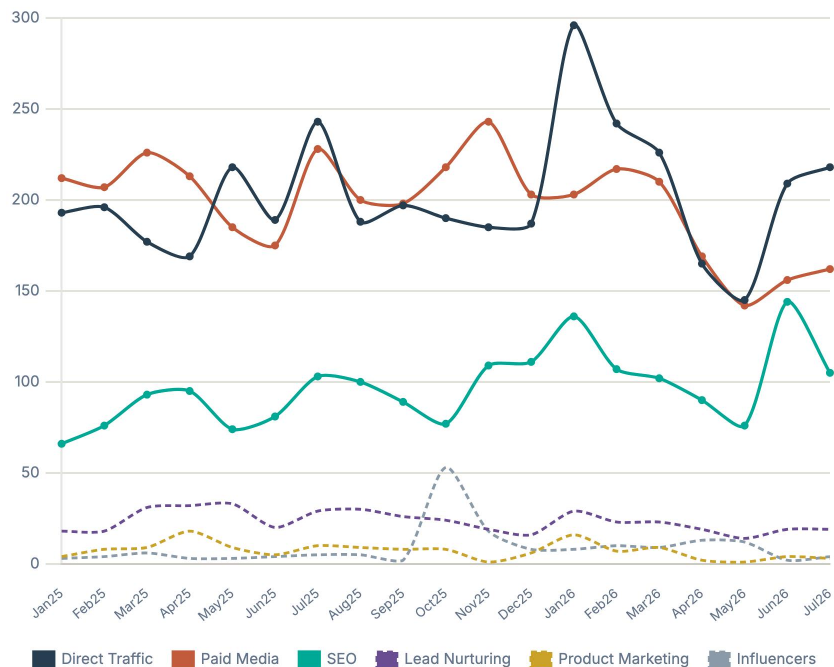

So what: in Colombia, Direct Traffic crosses above Paid Media starting January 2026 — organic takes the lead. In Mexico, Paid Media stays above the other channels throughout, without a single reversal in order.

New logos, not just MQL, confirm the brand effect

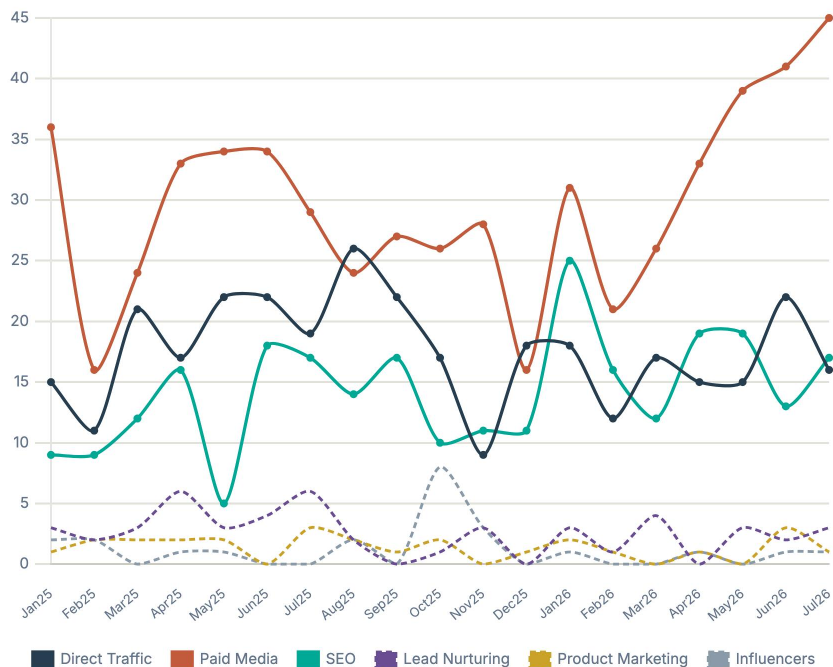

Discussion topic · 5/11

New Core logos by channel, month by month — what actually converts into a customer, not just what enters the funnel.

COLOMBIA — CORE LOGOS BY CHANNEL

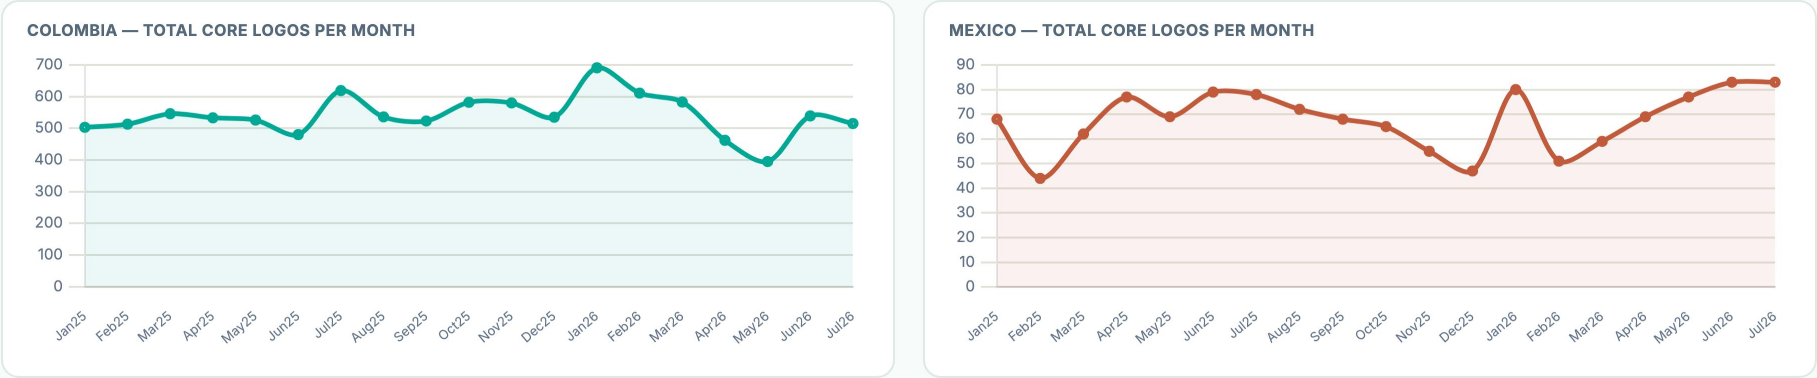

MEXICO — CORE LOGOS BY CHANNEL

So what: In Colombia, Direct Traffic posts its highest jump of the period in January 2026 (296 logos, the peak) — the same month as the Paid cutback. In Mexico, Paid Media leads in logos throughout, with neither Direct nor SEO able to take off.

Total Core logos, month by month (all channels combined). Each country on its own scale.

	LOGOS H2'25 (AVG/MO)	LOGOS H1'26 (AVG/MO)	MQL H2'25 (AVG/MO)	MQL H1'26 (AVG/MO)
Colombia	562.5	542.3 (-3.6%)	1,609.5	1,185.1 (-26.4%)
Mexico	64.2	71.7 (+11.7%)	314.0	347.1 (+10.5%)

So what: Colombia holds nearly the same logo volume (-3.6%) with 26.4% fewer MQL — a real efficiency gain. Mexico grows logos (+11.7%) by feeding in 10.5% more MQL — volume-driven growth, not better conversion.

Note: May 2026 is the lowest point in Colombia's entire series (395 logos) — coincides with the presidential election and the eve of the World Cup, likely seasonal/situational noise rather than a structural signal.

Which channel does departing Core come from — and is it changing over time?

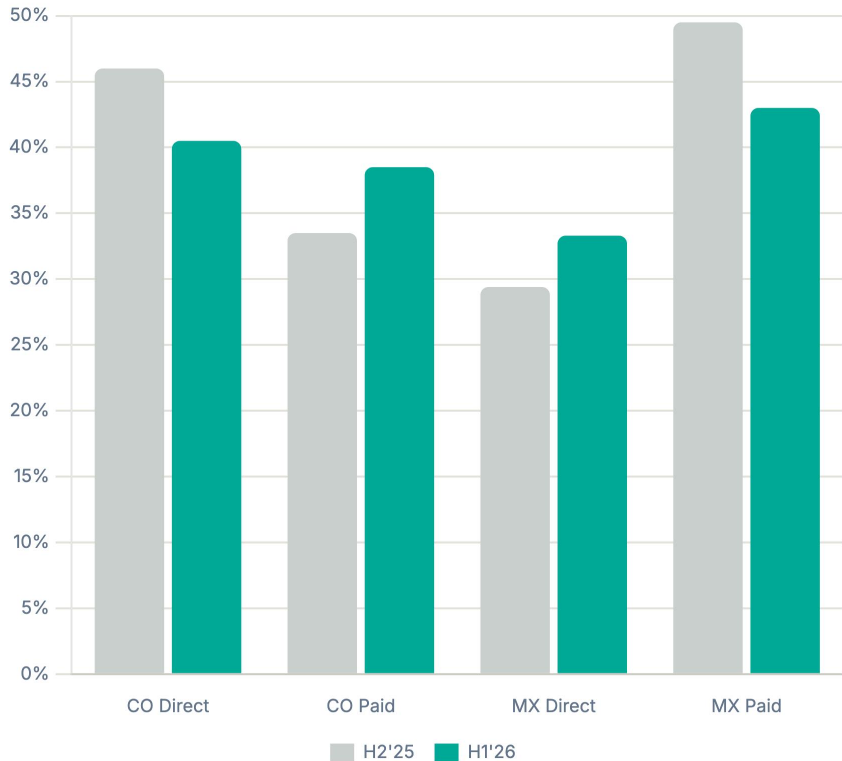

Direct Traffic and Paid Media's share of Core churn, H2 2025 vs. H1 2026. Churn data availability starts in June 2025.

	DIRECT H2'25	DIRECT H1'26	PAID H2'25	PAID H1'26
Colombia	46.0%	40.5%	33.5%	38.5%
Mexico	29.4%	33.3%	49.5%	43.0%

So what: in Mexico, Paid's share of churn dropped (49.5%→43.0%) while its acquisition weight stayed flat — campaign iteration genuinely improving quality. In Colombia, Paid's churn share rose (33.5%→38.5%) even as its acquisition weight dropped sharply — worth investigating.

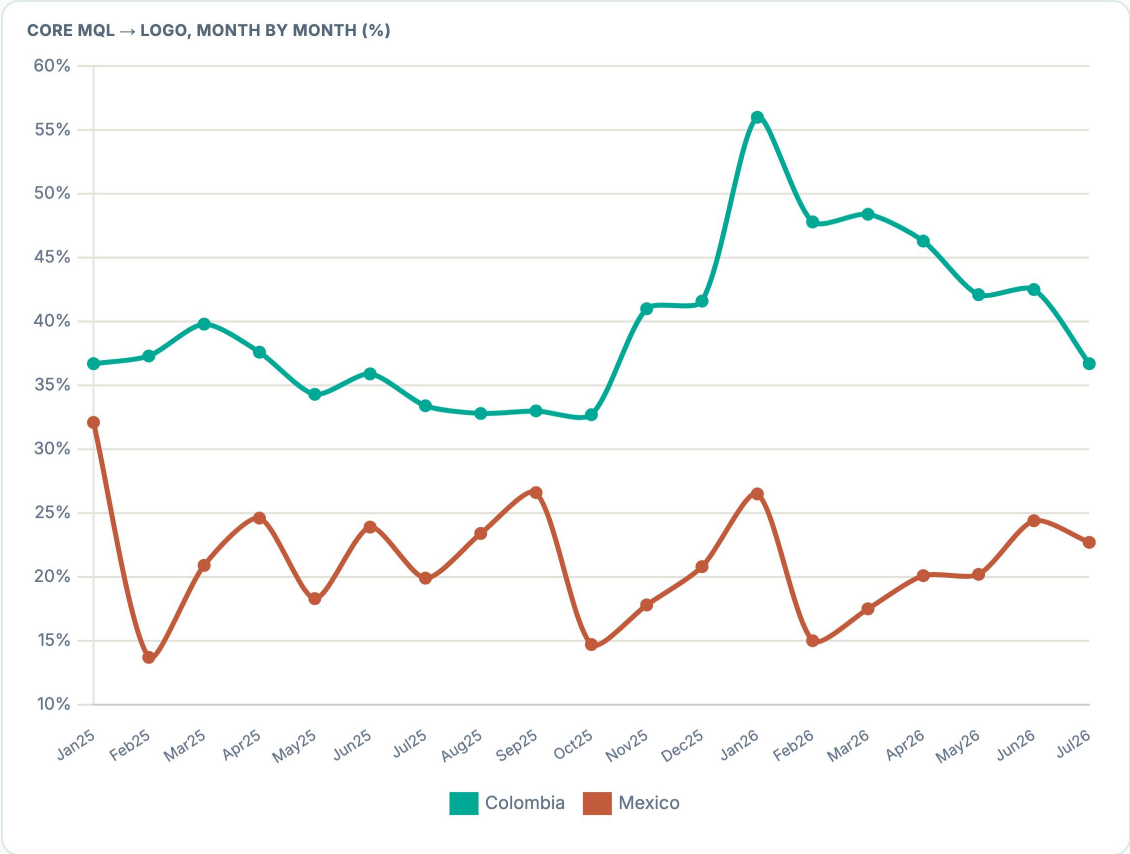

Method note: both periods are 200-company samples due to a query tool limit. Directionally correct, not an exact count.

DIRECT AND PAID'S SHARE OF CORE CHURN (%)

The same Paid cutback produced different results depending on each market's brand

Core MQL → Logo conversion rate, month by month. The decision was the same in both countries — the result depended on how much brand-driven demand already existed to absorb the cut.

	JAN - NOV 25	DEC 25 - JUL 26
Colombia	35.9%	45.2%
Mexico	21.5%	20.9%

So what: in Colombia, Direct Traffic filled the room Paid left — blended conversion rose +9.3pp, without this being a deliberate mix strategy. In Mexico, without that brand cushion, blended conversion stays flat (21-22%).

Churn isn't where the difference between the two markets lies

Monthly Core churn rate, Alegra Contabilidad product only (not consolidated across all Alegra products) — here both countries behave similarly and stably.

	JAN-NOV 25	DEC 25-JUL 26
Colombia	3.28%	3.21%
Mexico	2.67%	2.66%

So what: both countries retain equally stable before and after the period — churn barely moves either way. The differentiating story is entirely on the acquisition side, not retention.

Focusing on Colombia and Mexico doesn't change what we already knew by channel — it confirms it with more evidence.

1 Audit Paid Media
Still the largest channel and the weakest converter — Mexico is the clearest case of this.

3 Reinforce SEO content
Colombia already did this and it lifted conversion — the direct evidence to scale it in Mexico.

5 Reallocate Paid budget
Colombia already shifted ~13 points from Paid to Direct/SEO in December 2025 — the precedent to replicate in Mexico.

2 Review marketing strategy
Assess targeting and creative by Core before assuming it's a Sales-only problem.

4 Scale Lead Nurturing
Still a low-volume, high-conversion channel in both countries — underutilized in both.

6 Validate targeting alignment
Confirm current targeting is aligned with performance data before scaling any channel further.

The decision was the same in both countries — cut Paid Media to look for efficiencies. Colombia benefited because it already had the brand for Direct Traffic to fill the gap. Mexico needs to build that same brand cushion first.

COLOMBIA — PROTECT AND UNDERSTAND THE BRAND ASSET

- 1 Confirm the December 2025 Paid cutback was the trigger — and that the Direct Traffic gain really comes from brand awareness, not another coinciding cause.
- 2 Document the level of brand/PR/positioning investment sustaining that Direct Traffic — it's the real asset behind the result.
- 3 Watch that the current Paid level (35-45%) is sustainable — if Direct Traffic depends on brand investment that gets cut, the effect could reverse.

MEXICO — BUILD BRAND BEFORE REPLICATING THE CUTBACK

- 1 Diagnose Mexico's current brand awareness/positioning versus Colombia's — the variable that explains why the same cutback didn't produce the same mix effect.
- 2 Evaluate an investment in brand building (PR, presence, awareness) before expecting Direct Traffic to absorb a larger Paid reduction.
- 3 In the meantime, keep documenting the efficiency gain within Paid itself — it's a real win, even if it's not the same lever that worked in Colombia.

Accountants — Month-End Summary

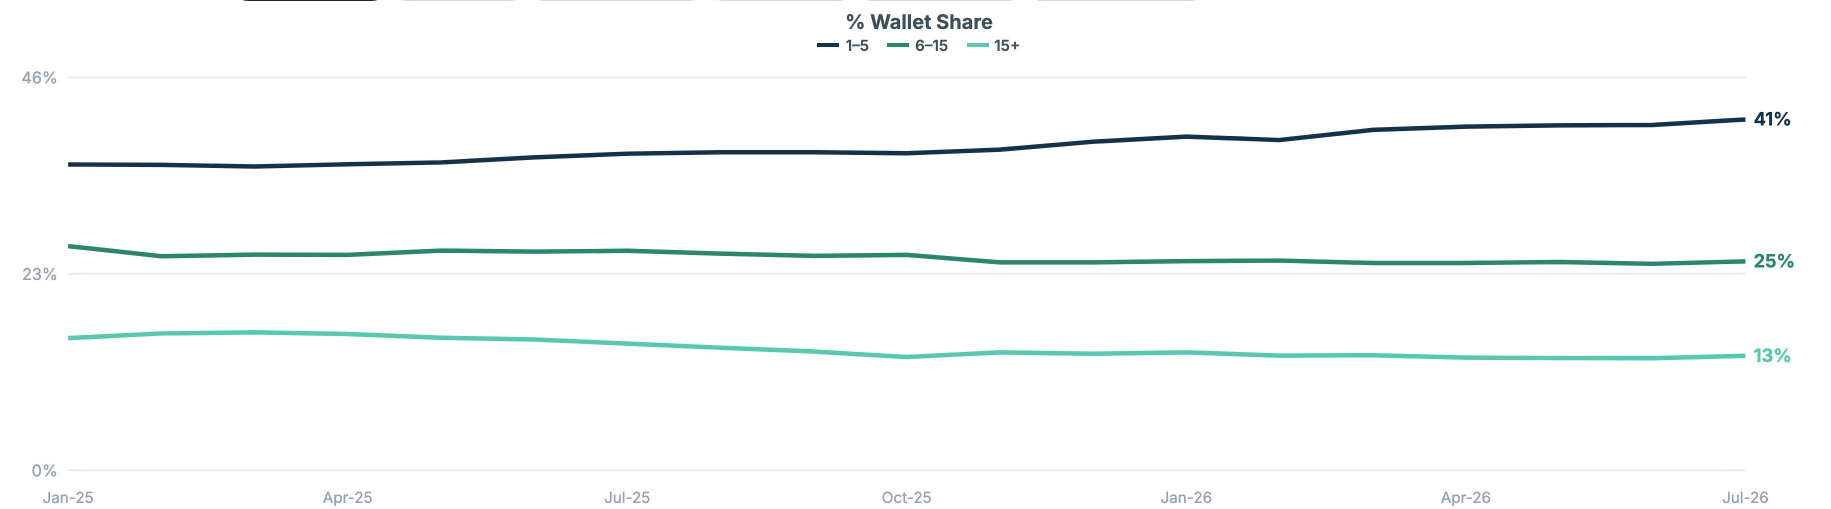

July 2026 · by declared portfolio

MONTH-END CLOSE · ONE ROW PER DECLARED-PORTFOLIO RANGE

DECLARED PORTFOLIO	ACCOUNTANTS	TOTAL PORTFOLIO	MIGRATED PORTFOLIO	% WALLET SHARE	Δ WS VS PREV Q	2+ LOGOS	CHURN
1-5	1,591	5,319	2,198	41%	▲ +1pp	408 (26%)	4.8%
6-15	1,209	11,453	2,818	25%	● 0pp	547 (45%)	3.8%
15+	498	21,237	2,862	13%	● 0pp	283 (57%)	3.2%
Not declared	6,674	—	7,656	—	—	611 (9%)	—

TREND · PICK A METRIC

- % Wallet Share
- Accountants
- Migrated Portfolio
- Total Portfolio
- % with 2+ Logos
- Accountant Churn

Wallet share drops with portfolio size (41% for 1-5 → 13% for 15+), but the large accountants are the most valuable: more multi-client (56% with 2+ logos) and lower churn (3.2%). The lever is capturing more of the large portfolios. And there are 6,674 "Not declared" accountants — more than all the others combined — that we can't even measure wallet share on. Pick a metric above to see its trend by range.

WHERE ACCOUNTANTS MOVE · TIER = NUMBER OF PAID LOGOS ON ALEGRA

PAID LOGOS	ACCOUNTANTS	LOGOS	NEW	UPSELL ↑	DOWNSELL ↓	CHURN
■ 1 paid logo	8,132	8,132	491	100	0	443
■ 2–5	1,562	3,993	16	13	102	7
■ 6–15	237	2,077	2	3	12	0
■ 15+	51	1,348	0	0	2	0
Total	9,982	15,550	509	116	116	450

Churn is almost entirely a single-logo event: 98% of it is 1-paid-logo accountants (443 of 450). Accountants with 2+ paid logos barely leave (7 / 0 / 0). Upsell and downsell cancel out (116 each), so on net accountants aren't climbing tiers — the base stays dominated by fragile single-logo accountants.
